"Nucleotide sequence of the gene encoding the spike glycoprotein human coronavirus HCV 229E.";

J. Gen. Virol. 71:1065-1073(1990).

-i- FUNCTION: THE PEPLOMER PROTEIN MEDIATES THE BINDING OF VIRION TO THE HOST CELL RECEPTOR AND IS INVOLVED IN MEMBRANE FUSION AND IN SYNCYTION FORMATION.

-i- SUBCELLULAR LOCATION: Type I membrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human coronavirus (strain 229E).

J. Biol. Chem. 268:18573-18579(1993).
-i- FUNCTION: MAY PLAY A ROLE IN FAT METABOLISM.
-i- CATALYTIC ACTIVITY: Nucleoside 3',5'-cyclic phosphate.
-i- CATALYTIC ACTIVITY: Nucleoside 3',5'-cyclic phosphate.
-i- ENZYME REGULATION: INHIBITED BY CGMP.
-i- SUBCELLULAR LOCATION: Membrane-bound (Potential).
-i- TISSUE SPECIFICITY: ABUNDANT IN ADIPOSE TISSUES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        063085;

FORM IN TRANS CISTERNAE OF GOLGI.

TISSUE SPECIFICITY: HIGHLY EXPRESSED IN STOMACH, COLON, SMALIVARISTINE, LUNG AND KIDNEY AND TO A LESSER EXTENT IN SALIVARIANCE, LUNG AND LIVER.

GLAND, BLADDER, UTERUS AND LIVER.

MISCELLANEOUS: ALSO ACTS ON THE CORRESPONDING 1,4-GALACTOSYL DERIVATIVE, FORMING 1,3-L-FUCOSYL LINKS.

SIMILARITY: BELONGS TO THE GLYCOSYLTRANSFERASE FAMILY 10.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PATHWAY: Glycosylation: TYPE II MEMBRANE PROTEIN.

1.4-L-fucosyl)-N-acetyl-D-glucosaminyl-R.

PATHWAY: Glycosylation.

PATHWAY: Glycosylation: TYPE II MEMBRANE PROTEIN. MEMBRANE-BOUND FORM IN TRANS CISTERNAE OF GOLGI (BY SIMILARITY).

POLYMORPHISM: THERE ARE TWO ALLELES (A AND B). ALLELE A HAS ARC 162 AND WAL-304. ALLELE B HAS GLY-162 AND MEMBRANE-BOUND FORM AND ALLELE B HAS GLY-162 AND MEMBRANE-BOUND FORM AND MEMBRANE-BOUND FORM IN TRANS CISTERNAE OF GOLGI (BY SIMILARITY).

ALTERNATIVE PRODUCTS: 2 ISOFORMS; 1 (SHOWN HERE) AND 2; MAY BE PRODUCED BY ALTERNATIVE SPLICING.

PRODUCED BY ALTERNATIVE SPLICING.

TISSUE SPECIFICITY: IN THE EMBRYO, HIGH LEVELS OF EXPRESSION ARE FOUND IN THE ARTERIAL WALLS AT 13.5 DAYS POST COLTUM (DPC). LOW FOUND IN THE INNER EAR AT 13.5 DPC AND IN SOME CELLS IN THE THYMUS AT 16.5 DPC. EXPRESSED IN THE TRACHEAL EPITHELIUM BELOW THE THYMUS AT 16.5 DPC. EXPRESSED IN THE TRACHEAL EPITHELIUM BELOW THE VOCAL CORD AND IN THE HAIR FOLLICLES AT 18 DPC.

SIMILARITY: CONTAINS 1 HMG BOX.
